

Progress® OpenEdge®

Progress simplifies and accelerates the design, delivery, deployment, and management of world-class digital experiences, bringing together apps, data, and content

Our Progress Capacity

Experienced team of **senior OpenEdge architects** with more than **20 years** in **ERP application development**.

Experienced team of **senior OpenEdge developers** with more than **15 years of experience**.

A **continuous stream** of professionals in training.

Our Progress teams are highly committed and highly stable (close to zero turnover)

Case Study

Our customer faced a **crucial decision** that would affect the company's growth prospects in future years: How should the company modernize its trusted **Distribution ERP software**, which had been powering global wholesale distributors' operations for over twenty-five years?

Requirements for modernization

Our team carefully thought through the requirements for modernization. The new application had to be available in both a character-based UI and graphical, browser-based UI for new and more exacting users. Mobile editions of the application would also have to be relatively straight forward to develop. Integration with third-party applications was also paramount.

Approach this challenge

Our group decided to approach this challenge by applying service-orientation as a design principle while separating business logic from the presentation layer.

the benefits were immediately visible

Once launched, the benefits were immediately visible. Our group was able to build a mobile app enabling salespeople to access the ERP suite. Using Progress OpenEdge Mobility, the app calls the REST services on the back end.
